

Mitsubishi Mulls Options for Japan Offshore Wind Including Exit

By [Shoko Oda](#)

August 27, 2025 at 7:06 AM GMT+5:30

[Mitsubishi Corp.](#) is considering all options for three Japanese offshore wind projects, including an exit, after the company initiated a review earlier this year following changes to the economic outlook.

No decision has been made at this point, the company said in a statement on Wednesday in response to media reports that Mitsubishi was in the process of withdrawing from the wind projects. The trading house didn't elaborate further on what other options it was considering.

"The reports highlight the difficulty of making offshore wind projects profitable in Japan," Syusaku Nishikawa, an analyst at Daiwa Securities Co., wrote in a research note. Still, "there is some room for an optimistic view, namely companies may be able to win projects if sites are up for re-bidding, or if profitability of future projects can be improved."

Rising costs have upended investment plans in the offshore wind sector across the world, including higher interest rates and tight supply chains, while some nations are backing away from green policies – most notably the US. President Donald Trump's stance against wind has derailed several projects.

Mitsubishi, along with a unit of [Chubu Electric Power Co.](#) and Venti Japan Inc., won the rights to develop the three projects in 2021.
